

SMART SPECIALISATION IN PRACTICE

“one year onwards” – a follow-up to our 2013 survey ([link](#))

= final results =

Source: DG Regio Website

Source: Regional Innovation Scoreboard

Our Motivation

- ➔ Beyond general conceptual considerations regarding the best possible approach – determine to what extent the policy agenda is taking root in practical policy making
- Understand the state of play regarding the submission and approval of RIS3 strategies, follow up on our [2013 survey](#)
- Understand whether the overall notions of the RIS3 guidelines and the Sevilla Discussions have – in the policy maker’s opinion – been captured in the actual strategy documents
- Understand to what extent a linkage has been established between RIS3 Strategies (as now submitted) and the to be approved Operational Programmes
- Understand how regional (or national) policy makers in charge of RIS3 processes are approaching the new challenge of developing comprehensive monitoring systems for their novel innovation strategies

Our Evidence

- Survey of **relevant regional innovation policy makers and selected consultants** across all 28 member states (Online Survey, Questback EFS)
- Information collected during the period from early **May 2014** to late **August 2014**
→ **a follow up to our 2013 study**
- **Who is a relevant policy maker?**
 - Despite much improved coverage: Far from all are listed on the S3 Platform
 - Managing authorities may or not be the right addressees
 - Factual responsibilities have changed since 2013 due to elections, reorganisation etc.
 - The complete sample of the 2013 was re-used, but substantially complemented
- **Over 1,000 potential respondents contacted**
→ **160 started to answer** and **more than 80 completed the questionnaire in full**
- Reference: around 230 ‘standard’ OPs (nat. or reg.), less managing authorities
- 65 regional and 5 national level representatives completed the questionnaire in full, 47 regional and 17 national level representatives answered some questions
→ fairly limited ‘double counts’ per region*

*although the total number of duplications is notable with 39, 31 of those are incomplete cases which, as anecdotal evidence and the pattern of drop-outs suggests are often due to internal delegation, i.e. cases in which two or three persons from a region looked at the first page and then decided which of them should fill in the questionnaire

Coverage (Regional Distribution of Responses)

dark blue: partially completed questionnaire (region)

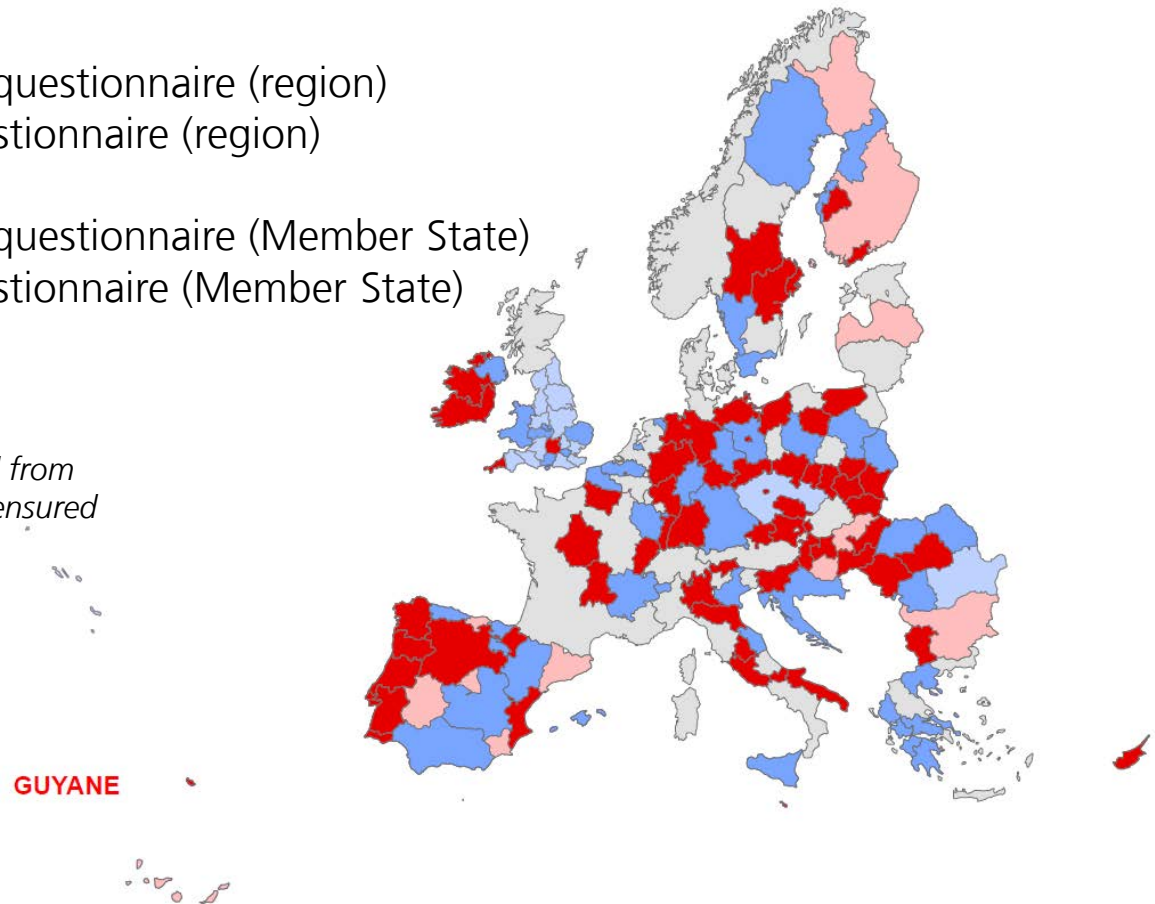

dark red: fully completed questionnaire (region)

light blue: partially completed questionnaire (Member State)

light red: fully completed questionnaire (Member State)

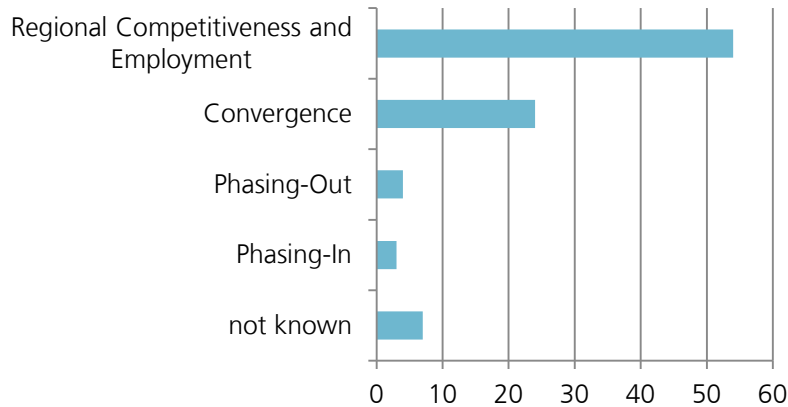

grey: not taken part

*the information on coverage is separated from
the actual survey data, full anonymity is ensured*

Coverage (Respondents by Characteristics)

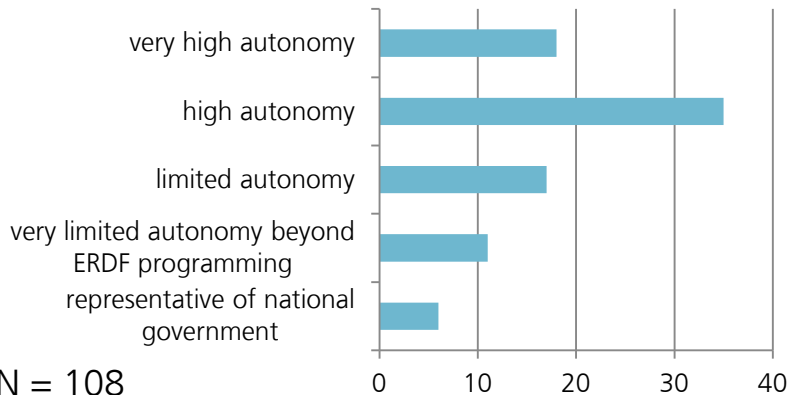

Support Category of Region 2007-13

Group of Member States

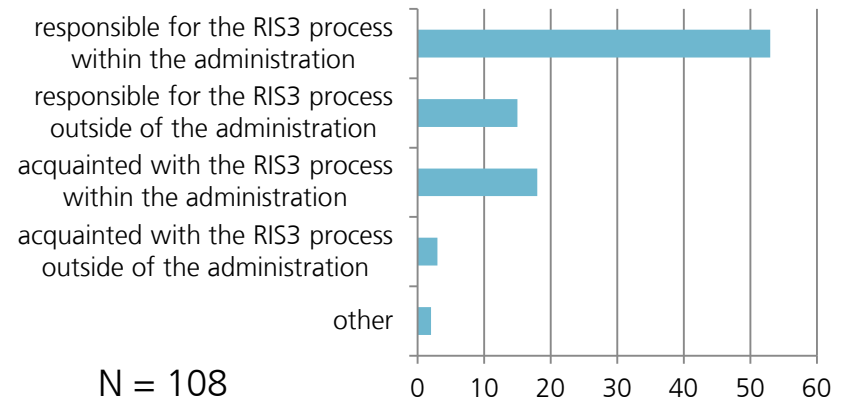

Autonomy of Region

N = 108

Role of Respondent in RIS3 Process

N = 108

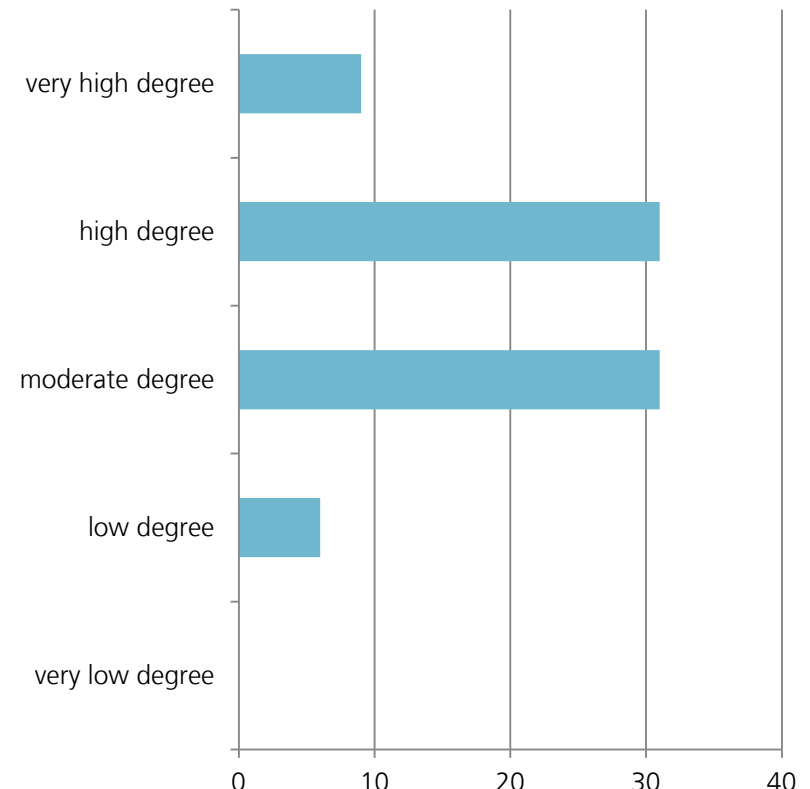

General Belief in Political Strategies: Reasonably High – for Policy and for Impact

Potential of the RIS3 Process
to Prompt Changes in Support Policy

N = 92

General Potential of Innovation Strategies
to Prompt Economic Transformation

N = 92

State of Play with Regard to RIS3 Strategies: Advancing but far from Completed

...strategy **submitted** to EC

...strategy **approved** by EC

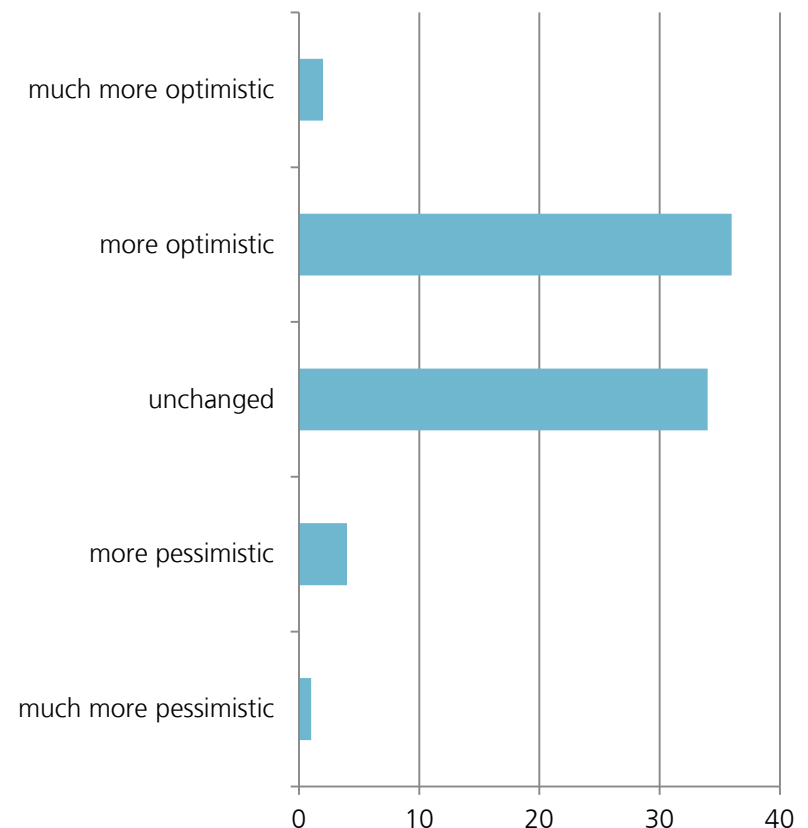

RIS3 Process is Perceived more Positively than One Year Ago

Feeling that Process is Imposed

N = 92

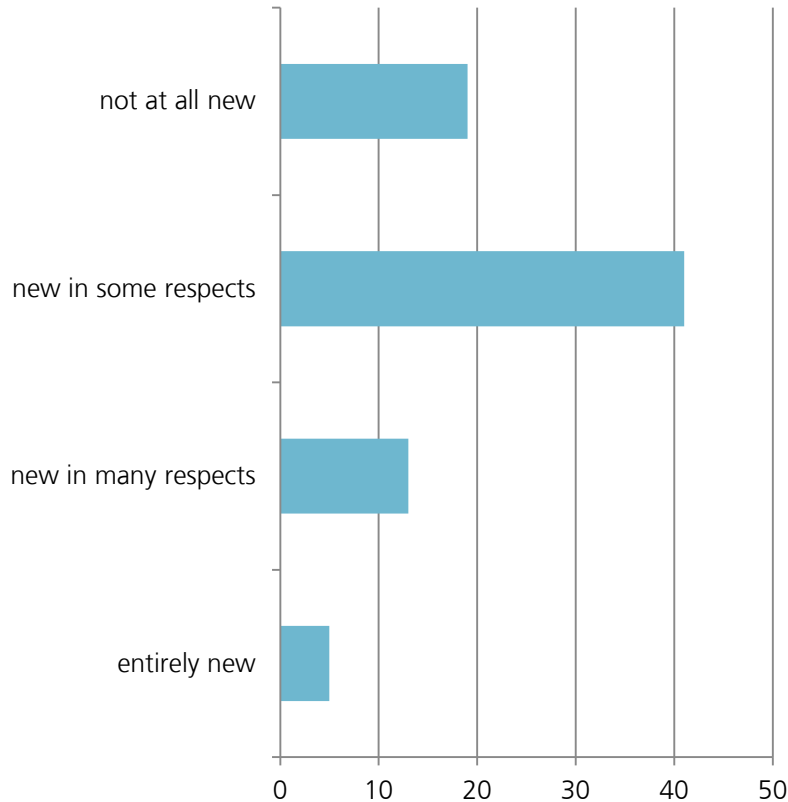

Feeling about Process compared to 1 Year Ago

N = 92

EDP is not Entirely Novel as an Approach but the Transformation Seems Lasting

Degree of Novelty of Planning Approach
(vis-a-vis regional / national traditions)

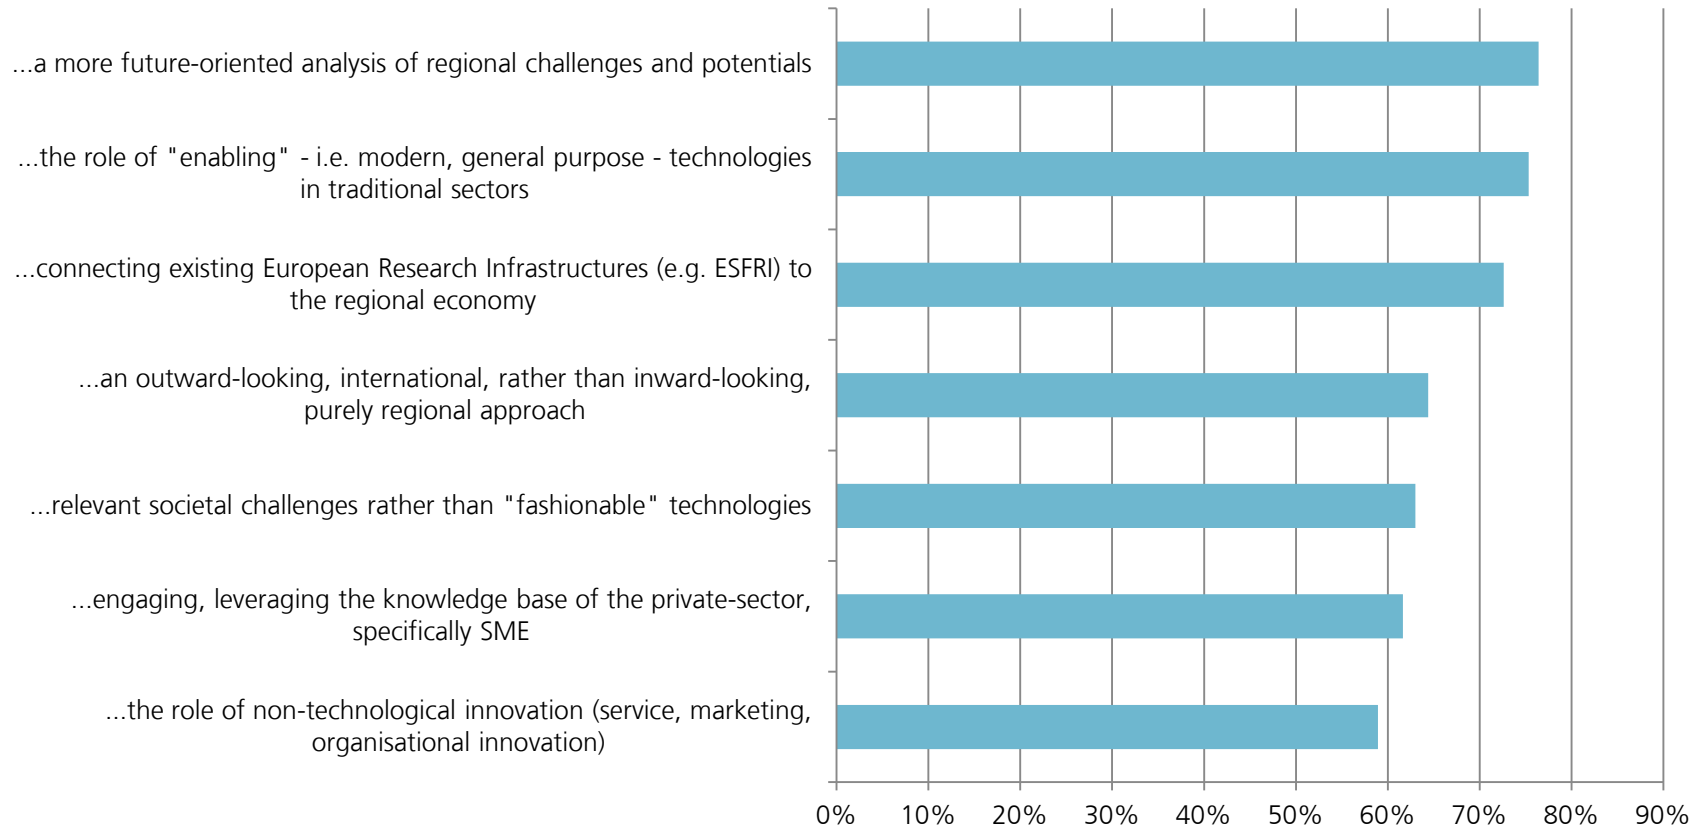

N = 91

Degree to which EDP will be Continued

N = 92

Key Notions of the RIS3 Guidelines have been Considered in Strategy Development

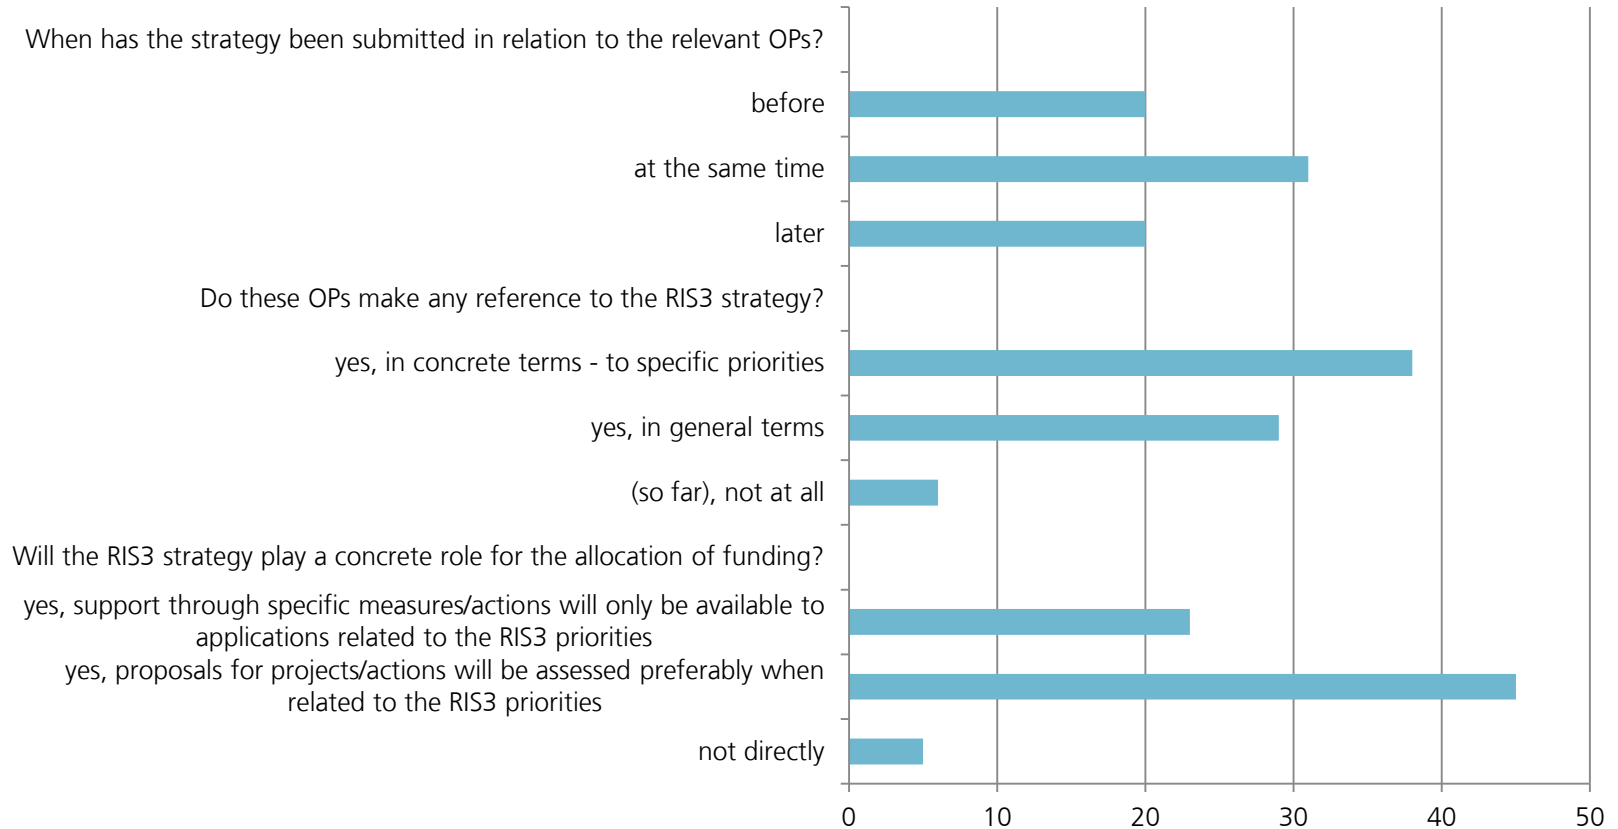

N = 88

Number of Priorities: A Clear Focus Seems Attained

Relation between Strategy and Practice

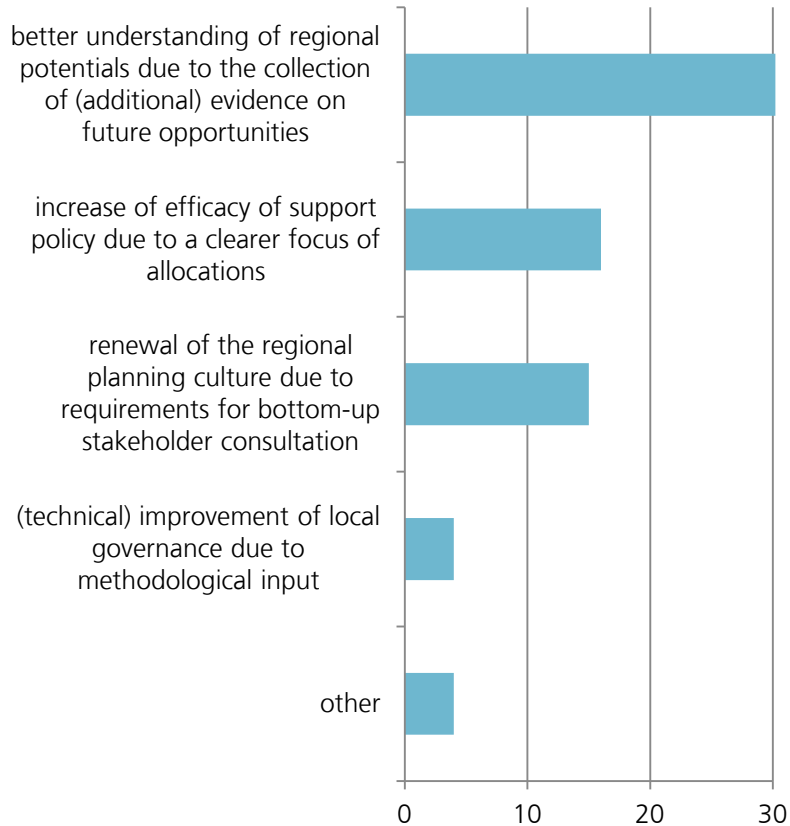

RIS3 is linked to Operational Programming

N = 87

Key Result of RIS3: Better Understanding Yet: Not Always Groundbreaking

Key Outcome of RIS3 Process

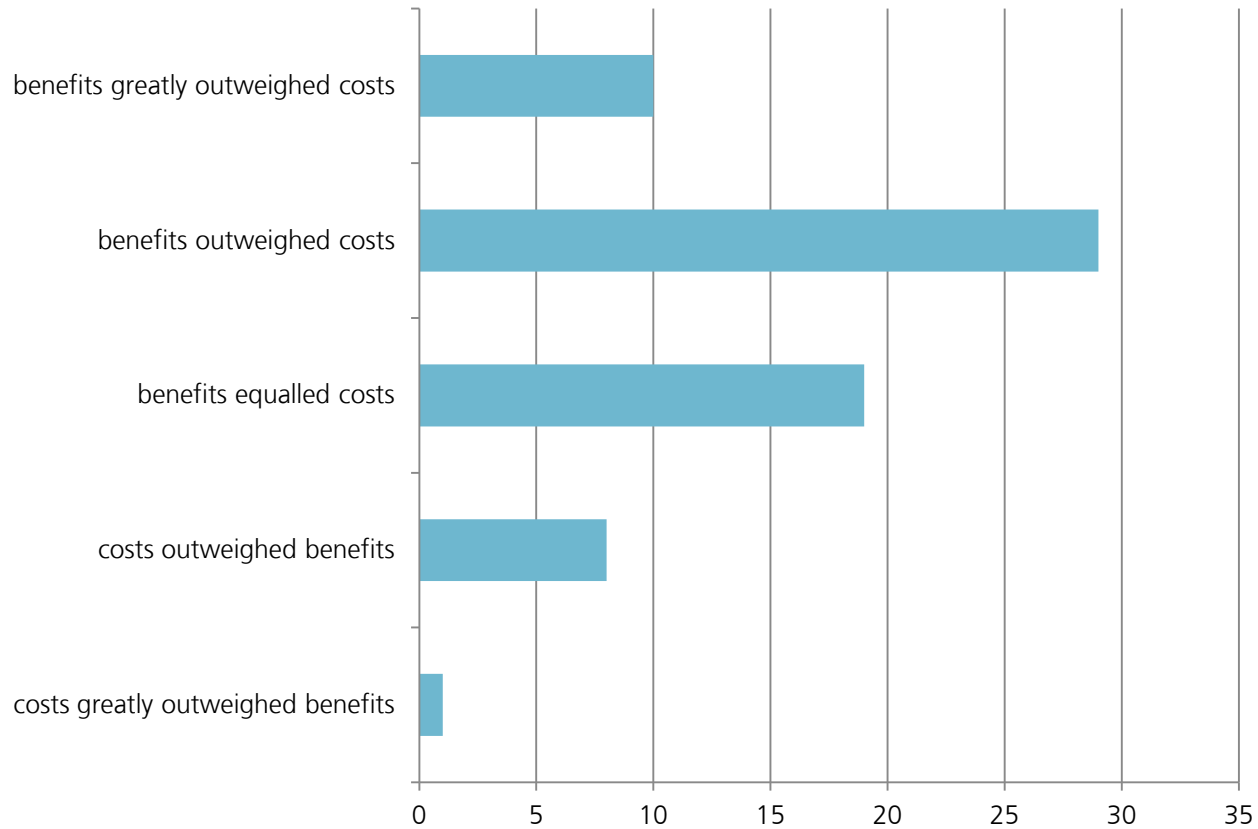

N = 91

Novelty of Findings of EDP

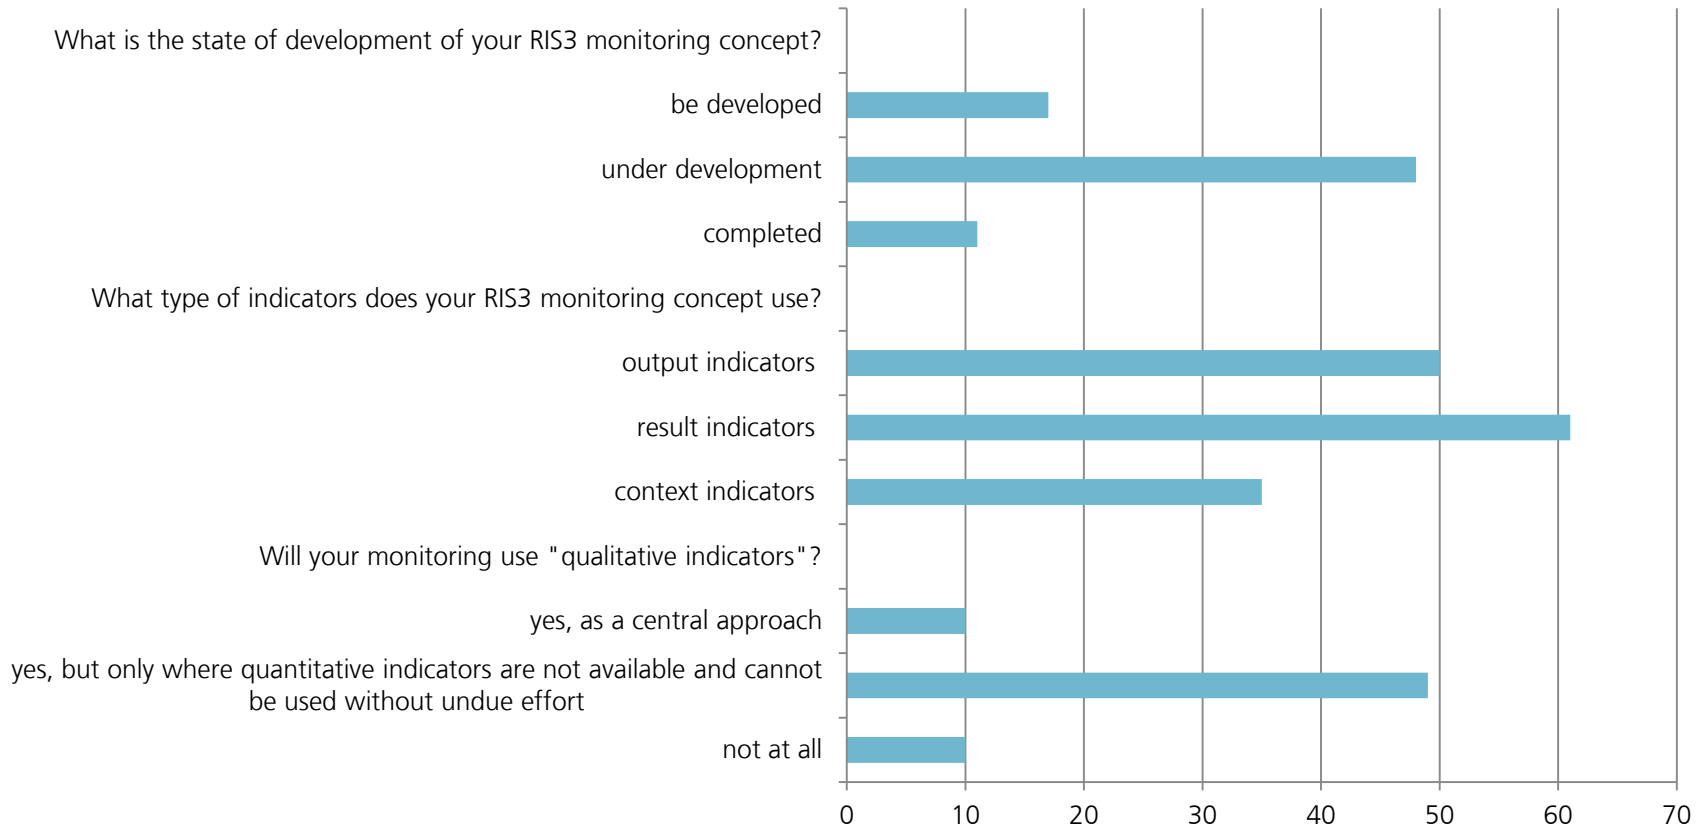

N = 86

Overall Assessment: Benefits Outweighed Costs

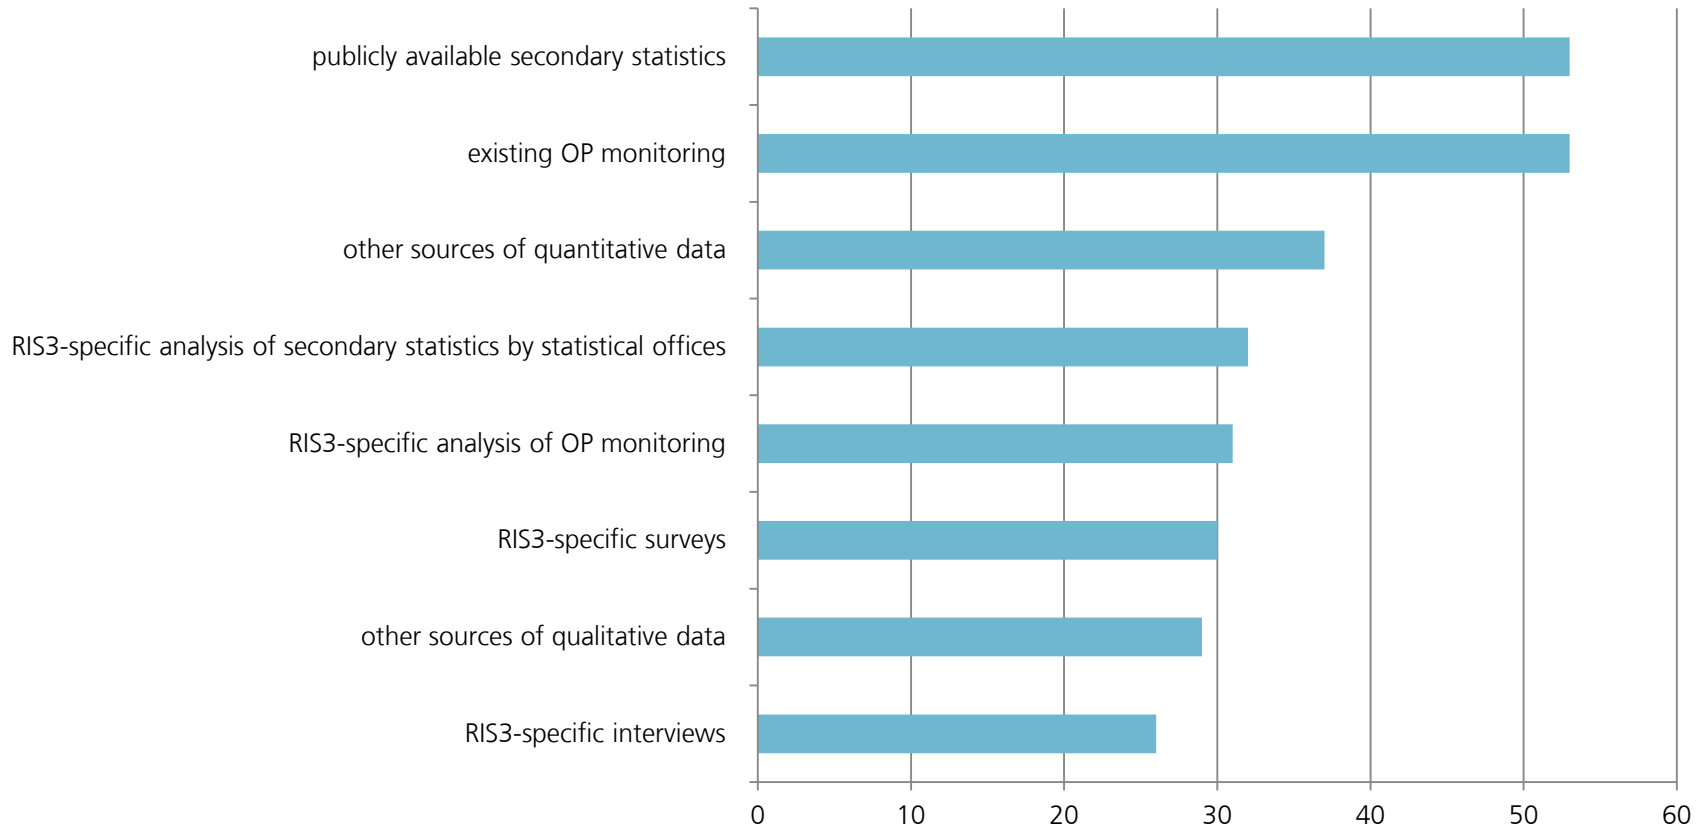

N = 91

The Next Challenge: RIS3 Monitoring State of Play and Approach

N = 87

Basis for RIS3 Monitoring: Available Data Sources Prevail

N = 86

Summary

- As a tendency, the RIS3 Agenda has become accepted more broadly and viewed more positively in the course of the past year
- It is, however, an ongoing process with many strategies still under negotiation
- While there is a general belief in the potential efficacy of political strategies
- In most places, the EDP based process is not considered disruptively new, the degree of novelty of the EDPs' findings, however, remains limited ('moderate')
- When asked to focus on one, a better and more evidence based understanding of the regional situation is considered as *the* key outcome of the RIS3 process by many
- In many cases, there seems to be a quite robust integration (foreseen) between RIS3 strategies and the relevant Operational Programmes
- The development of RIS3 Monitoring Concepts appears as the next challenge ahead – one that regions have so far only begun to address
- The prevalent approach to RIS3 Monitoring Concepts seems to be a conservative one, based on existing indicators

Policy Conclusions

- The political persistence in following the approach through seems to have paid off, the RIS3 agenda has gained rather than lost popularity in the process of implementation
- It seems worth monitoring what to make of the fact that the actual budgetary refocusing of support allocations features as a secondary rather than primary result of the RIS3 agenda
 - On the one hand, it seems worth monitoring to what extent the RIS3 strategies and operational programmes are actually that well integrated – given that a reallocation of funding or raise in efficacy is not mentioned as the process’ most prominent result
 - On the other hand, this may well be due to the fact that many RIS3 strategies, particularly in better-off regions, mostly tend to re-adjust and formalise existing policies that have been pursued for a number of years
- The “renewal of the regional planning culture” seems to have been a quite important secondary outcome for number of regions in which the EDP has been a novel approach with a view to their administrative traditions, related challenges will likely remain acute
- It seems worth following to what extent conservative monitoring approaches that are to a large extent based on existing data collections can in a suitable manner capture central RIS3 notions like future-orientation, outward-orientation or cross-innovation

Thank you !
